USMAN AMJAD

Full-Stack Developer | MERN Stack | Next.js | TypeScript

+92-300-4170573 • usmanamjad987654321@gmail.com • FDA City, Faisalabad, Pakistan

Portfolio • github.com/usman-bey-lab • LinkedIn

SUMMARY

Full-Stack Developer and Computer Science student with hands-on experience designing and shipping production-ready web applications. Migrated a complete MERN stack e-commerce platform to Next.js 15 App Router, adding Server-Side Rendering, a separate admin dashboard, JWT authentication, Cloudinary image storage, and cloud deployment on Vercel and Railway. Experienced in RESTful API design, MongoDB schema modelling, and debugging complex real-world issues across the full stack. Passionate about clean architecture, iterative improvement, and building things that actually work.

EDUCATION

Bachelor of Science in Computer Science (BSCS) | *Virtual University of Pakistan* *Sep 2022 – Jul 2026*

- Relevant Coursework: Data Structures & Algorithms, Web Technologies, Object-Oriented Programming, Database Systems, Software Engineering

EXPERIENCE

Associate Developer | *Freelance Collaboration* *2025 – Present*

- Developed and maintained small-to-medium-scale web applications using the MERN stack, delivering responsive frontends and robust REST APIs.
- Managed end-to-end project workflows — from requirements gathering to deployment — ensuring timely delivery across multiple concurrent client engagements.
- Facilitated direct client communication to translate business requirements into technical specifications, iterating based on feedback to improve satisfaction.

IT Intern | *Punjab Beverages Co.* *Jul 2024 – Sep 2024*

- Assisted in deploying and configuring a Graylog server for centralized system logging, improving infrastructure observability.
- Followed structured technical workflows to install and test monitoring tools, verifying accurate real-time log capture from internal systems.
- Produced detailed documentation of the setup process, enabling the team to replicate the configuration for future deployments.

PROJECTS

Shopper — *Next.js 15, Express.js, MongoDB, Cloudinary, JWT, Railway, Vercel*
Live Shop | **Admin Panel** | **GitHub**

- Migrated a full MERN stack e-commerce platform to Next.js 15 App Router, implementing Server-Side Rendering (SSR), file-based routing, and nested layouts — replacing Create React App and Vite admin with two independent Next.js apps.
- Built a complete feature set including size-based cart management (productId_size key format), product reviews with star ratings, promo code validation against MongoDB, checkout flow with order tracking, and order confirmation.

- Resolved complex production issues including ES Module dotenv hoisting, Next.js 15 async params, hydration errors from localStorage reads, and CORS misconfiguration across three ports.
- Deployed backend to Railway and both Next.js apps to Vercel; migrated image storage from local disk to Cloudinary for production-safe persistent URLs.
- **Live Shop:** https://e-commerce-n9qm.vercel.app/
- **Admin Panel:** https://e-commerce-xcdy.vercel.app/
- **GitHub Repo:** https://github.com/usman-bey-lab/E-Commerce

Groq AI Chatbot — *React, Vite, Groq SDK, Llama 4 Maverick, Tailwind CSS*

- Built a real-time AI chat interface using the Groq SDK and Llama 4 Maverick model, supporting multi-turn conversation history with persistent context across messages.
- Implemented four switchable AI personas (Assistant, Teacher, Coder, Writer) each with custom system prompts, allowing users to change the AI behaviour mid-session.
- Designed a polished dark UI with Tailwind CSS featuring animated typing indicators, auto-resizing textarea, smooth message animations, character count, and quick-start suggestion chips.
- Handled API rate limiting gracefully with user-facing error messages and implemented keyboard shortcuts (Enter to send, Shift+Enter for newline) and session clear functionality.
- **GitHub Repo:** https://github.com/usman-bey-lab

ThinkBoard — *React.js, Node.js, Express, MongoDB*

- Architected a full-stack collaborative workspace with modular React frontend, maximizing code reusability and maintainability.
- Designed and implemented secure RESTful API endpoints in Node.js/Express to handle real-time updates and user-generated content.
- Leveraged MongoDB's schema-flexible NoSQL architecture to efficiently manage dynamic, collaborative data structures.
- **GitHub Repo:** https://github.com/usman-bey-lab/Thinkboard

TECHNICAL SKILLS

Frontend:	React.js, Next.js 15, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS
Backend:	Node.js, Express.js, RESTful API Design
Database:	MongoDB, MongoDB Atlas, Mongoose ODM
Auth/Security:	JWT, bcrypt, Helmet.js, CORS, Rate Limiting
Tools:	Git, GitHub, Cloudinary, Multer, Vercel, Railway, Vite
Concepts:	MERN Stack, MVC Architecture, SSR/SSG, App Router, Agile Workflows

CORE COMPETENCIES

Team Collaboration • Problem Solving • Client Communication • Technical Documentation

CERTIFICATIONS

- Version Control — Coursera
- Programming with JavaScript — Coursera
- Introduction to Front-End Development — Coursera
- Digital Literacy: Using Mobile Devices — Cisco Networking Academy
