SUMMARY

Dedicated Computer Science student and Full-Stack Developer with hands-on experience building scalable, type-safe web applications using the MERN stack, Next.js, and TypeScript. Adept at end-to-end development from system architecture and RESTful API design to secure authentication and deployment. Proven ability to deliver client-facing solutions with a focus on clean code, performance optimization, and maintainability.

EDUCATION

Bachelor of Science in Computer Science (BSCS) | *Virtual University of Pakistan* Sep 2022 – Jul 2026

- Relevant Coursework: Data Structures & Algorithms, Web Technologies, Object-Oriented Programming, Database Systems, Software Engineering

EXPERIENCE

Associate Developer | *Freelance Collaboration* 2025 – Present

- Developed and maintained small-to-medium-scale web applications using the MERN stack, delivering responsive frontends and robust REST APIs.
- Managed end-to-end project workflows — from requirements gathering to deployment — ensuring timely delivery across multiple concurrent client engagements.
- Facilitated direct client communication to translate business requirements into technical specifications, iterating based on feedback to improve satisfaction.

IT Intern | *Punjab Beverages Co.* Jul 2024 – Sep 2024

- Assisted in deploying and configuring a Graylog server for centralized system logging under the supervision of the IT Manager, improving infrastructure observability.
- Followed structured technical workflows to install and test monitoring tools, verifying accurate real-time log capture from internal systems.
- Produced detailed documentation of the setup process, enabling the team to replicate the configuration for future deployments.

PROJECTS

ThinkBoard — *MERN Stack — React.js, Node.js, Express, MongoDB*

- Architected a full-stack collaborative workspace application with a modular, component-driven React.js frontend, maximizing code reusability and maintainability.
- Designed and implemented secure RESTful API endpoints in Node.js/Express to handle real-time updates and user-generated content at scale.
- Leveraged MongoDB's schema-flexible NoSQL architecture to efficiently manage dynamic, collaborative data structures.
- Owned the full deployment lifecycle — from local development environment to GitHub repository management and production build.

Repository: github.com/usman-bey-lab/Thinkboard

Shopper — *Full-Stack E-Commerce Platform — MERN, Next.js, TypeScript, JWT*

- Built a comprehensive full-stack e-commerce storefront and admin dashboard using the MERN stack, featuring product listings, cart management, and order processing.
- Migrating the React.js frontend to Next.js to leverage Server-Side Rendering (SSR) and Static Site Generation (SSG), improving SEO performance and initial page load times.
- Implemented TypeScript across the full codebase to enforce type safety, reduce runtime errors, and enhance developer productivity.
- Integrated JWT-based authentication with bcrypt password hashing and Helmet security headers, adhering to industry-standard security practices.
- Developed a custom admin panel with real-time inventory control, image upload functionality via Multer, and advanced filtered data views using MongoDB Atlas.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3
Backend: Node.js, Express.js, RESTful API Design
Database: MongoDB, MongoDB Atlas, Mongoose ODM
Authentication & Security: JWT, bcrypt, Helmet.js
Tools & Platforms: Git, GitHub, Multer, Microsoft Excel
Concepts: MERN Stack, MVC Architecture, SSR/SSG, Agile Workflows

CORE COMPETENCIES

Team Collaboration • Problem Solving • Client Communication • Project Management • Technical Documentation

CERTIFICATIONS

- Version Control — Coursera
- Programming with JavaScript — Coursera
- Introduction to Front-End Development — Coursera
- Digital Literacy: Using Mobile Devices — Cisco Networking Academy
